Subject: Re: ENGN4221 client meeting

Hi Marty.

I have discussed with production team, the total volume of the input for the rendering plant is 1176 kg. This value is based on the project (modular unit) that I am working on.

This value can be treated as a benchmark for students.

Let me know if you have any more questions.

Cheers

Jiefei

Hi Jiefei,

I Will check with the team this morning and send you a text to confirm.

This meeting isn't essential as the course convener said I can be the client from an administrative perspective to reduce the workload on yourself and Olympia.

The main this the students wanted feedback on was the projected throughput that would be required.

Cheers

Marty
